

RAHUL KUMAR

Software Engineer

Contact Number: +91 9090505889

Email-Id: rai.rahul.kumar509@gmail.com

Summary

Senior Software Engineer with 6+ years of experience specializing in building scalable, cloud-native data solutions. Dedicated to making data accessible, reliable, and actionable through expertise in data architecture, ETL processes, data warehousing, performance optimization, and data modeling. Proficient in Big Data technologies, with advanced skills in SQL, Python, and Apache Spark. Proven track record of designing resilient pipelines and optimizing data workflows to drive business insights and reduce operational costs.

Technical Skills

Languages /Library :	Python, Pandas, PySpark, NumPy, Apache Spark
Tools :	VS Code, Db visualizer, Git bash, Snowflake, Databricks, Kafka
Query Language :	SQL, PostgreSQL
Project Management Tools:	Jenkins, GitHub Actions, Jira, GIT
Cloud Service :	AWS (Glue, S3, Lambda, Redshift, Stepfunction, SNS, Textract, bedrock, opensearch etc), Azure

Project Details

Capgemini:

Role	Senior Software Engineer
Work Description	1. Designed and implemented an end-to-end real-time data pipeline leveraging Kafka topics and Apache Flink for stream processing, with MongoDB as the storage layer. This architecture significantly reduced data latency and enabled real-time updates for downstream applications. 2. Automated L1 ticket resolution and technical documentation through a chatbot solution, reducing operational costs and improving SLA compliance. Built using AWS services (Textract, Bedrock, OpenSearch, Lambda), Python, and Streamlit for seamless integration and user interaction. 3. Developed enterprise-grade ETL and automated reporting pipeline that reduces downtime by 30% through scalable ETL pipelines with proactive monitoring and fault-tolerant design. Architected using AWS Glue, S3, Redshift, and Python with idempotent ingestion and resilient data workflows.
Tools/Technology	VS Code, GITlabs, Jenkins, Postman, Python, SQL, AWS (Glue, S3, Lambda, Stepfunction, SNS, Redshift, Textract, bedrock, opensearch, agent), Snowflake, pyspark, Kafka, flink, mongo db

Cognizant Technology Solutions:

Role	Software Engineer
Work Description	1. Primary responsibility is to build and maintain ETL pipelines. 2. Performed migration and modernization of entire data warehouse from Legacy system (i.e. Informix server) to redshift data warehouse. Increases the time efficiency by 100%, data availability now became 99%.

	3. Build ETL pipeline for Loss and Premium model that will visualize and predict the upcoming loss and premium. And also generated reports for current loss and premium. 4. Performed migration task and modernization of ETL process from mainframe to python, snowflake, increasing the overall time efficiency by 200%. 5. automate backup and archive for every month in case of any failure
Tools/Technology	VS Code, GIT, Jenkins, Postman, Python, SQL, AWS (Glue, S3, Lambda, Stepfunction, SNS, Redshift), cloud forge, Snowflake, pyspark

Tata Consultancy Services:

Role	Software Engineer
Work Description	1. Build ETL pipelines i.e. Claims, sales, HR and that provides more insight in the respective fields, that data used for predicting future goals. For all pipelines, used AWS as a cloud platform, and also used glue and lambda for running ETL jobs. 2. Invoice Microservice - Successfully modified numerous modules that increased User-friendliness.
Tools/Technology	VS Code, Python, GIT, Jenkins, Postman, SQL

Experience

- **Identifying Business Opportunities:** Collaborating with stakeholders to identify critical business questions and translate them into actionable data driven insights, and achieving high client satisfaction through effective communication.
- I have successfully designed, built and deployed multiple ETL pipelines.
- Utilized **Agile** methodologies with **ADO** for project management, **bug tracking**, and sprint reporting and resolved defects within sprint cycles, maintaining the stability and reliability of the software product.
- Actively participated in all **scrum** activities including sprint planning, retrospectives, and refinement calls.
- Mastering Advanced Techniques: Proficient in a wide range of statistical techniques, transforming Data as per business requirement and for analysis purpose, SQL.
- Involved in development of **SQL** queries for comparison of large dataset from source to target system to ensure quality of data migration.
- Performed data validation and data quality checks to ensure data is consistent, accurate, and complete

Certification

AWS Practitioner : <https://www.udemy.com/certificate/UC-6c13f1bc-365e-4c33-942c-1eb8569b4cfb/>

Python: NumPy & Pandas : <https://www.udemy.com/certificate/UC-f48bde3d-727c-430c-8b89-52de0f97f544/>

Education

- B.Tech (ECE), BPUT University
Bhubaneshwar (2015-2019)

CGPA-7.4

- 12th (Physics, Chemistry, Mathematics), CBSE
Bokaro (2012-2014)

percentage - 76%

- 10th, CBSE
Bokaro (2012)

CGPA - 9
